Values that describe Selle San Marco

Adventure,
emotion,
sharing!

These are the values that rewrite the history of
Selle San Marco.

A new journey to discover cycling and the
emotions that only this sport can transmit.

**Because our emotion in creating saddles
comes from your emotion in living experiences.**

Questi sono i valori che riscrivono la storia di Selle San Marco.
Un nuovo viaggio alla scoperta del ciclismo e delle emozioni che solo
questo sport può trasmettere.
**Perché la nostra emozione nel creare selle nasce dalla tua
emozione nel vivere esperienze.**

Saddle ergonomics

The saddle is one of the most important accessories for a cyclist, and not just because it is one of the 3 contact points between their body and the bicycle. It is essential to choose a saddle that best suits your body structure, in order to be able to pedal comfortably and efficiently, whilst also avoiding any irritating discomfort. In fact, if the same athlete were to ride on different saddles, completely different contact pressures would be produced on each saddle.

In order to find the ideal saddle, the following factors should especially be taken into consideration:

- The morphology of the support points (i.e. the ischial tuberosities)
- The leg muscles
- Pelvis flexibility.

The combination of these 3 factors, will enable you to find the type of saddle most suited to your needs.

Selle San Marco is not only able to offer the best option for every body type, but also has the right tools to analyse the body structure of each user and therefore, better indicate the available options, according to these parameters:

- Saddle width (wide or narrow)
- The presence or absence of the central cut-out and its width.

La sella è uno degli accessori più importanti per un ciclista, e non solo perché è uno dei 3 punti di contatto tra corpo umano e bicicletta. La scelta della sella più congeniale alle proprie caratteristiche fisiche è fondamentale per poter pedalare in modo confortevole e performante, evitando altresì fastidiosi dolori. Uno stesso atleta che pedala su selle diverse infatti, può generare delle pressioni di contatto completamente differenti tra loro.

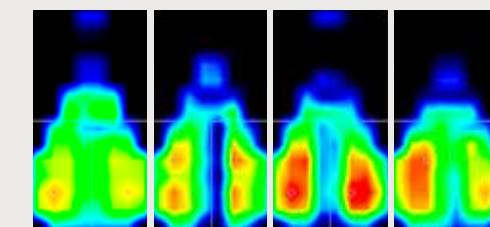

Per poter individuare la sella ideale è necessario analizzare in particolare:

- la morfologia dei punti di appoggio (ossia ischiatiche)
- la muscolatura delle gambe
- la flessibilità del bacino

La combinazione di questi 3 fattori permette di individuare la tipologia di sella più congeniale alle proprie esigenze.

Selle San Marco non solo è in grado di offrire l'opzione giusta per ogni tipologia ergonomica, ma dispone anche degli strumenti adatti per analizzare le caratteristiche fisiche di ogni utente e indirizzare così al meglio la scelta, secondo questi parametri:

- larghezza della sella (Wide o Narrow)
- presenza o meno del foro centrale e la sua ampiezza

Same user, same conditions but with different saddles will generate different pressure maps

Stesso utente, stesse condizioni ma pedalando con selle diverse genera mappe di pressione differenti

Never buy the wrong saddle again with the idmatch® Smart Caliper

Choosing a saddle is one of the most complex issues that cyclists face. Thanks to the special caliper designed for Selle San Marco, i.e. "idmatch Smart Caliper," the ideal saddle can be identified in just three quick, intuitive steps, in the user's presence. The tool's internal algorithm analyses the obtained anthropometric data in order to produce a result: intertrochanteric distance, thigh diameter and pelvis rotation.

code: 0000000000146 Smart Caliper

La scelta della sella è una delle questioni più complesse che deve affrontare un ciclista. Grazie a uno speciale calibro sviluppato per Selle San Marco e chiamato "idmatch Smart Caliper", è possibile individuare la tipologia di sella ideale in soli tre passaggi veloci e intuitivi, in presenza dell'utente. L'algoritmo interno allo strumento infatti tiene conto dei dati antropometrici che vengono rilevati: distanza intertrocanterica, diametro delle cosce e rotazione del bacino.

Codice: 0000000000146 Smart Caliper

idmatch
SMART CALIPER

1° STEP

Intertrochanteric distance

The distance between the two major femur tuberosities is measured and then combined with step 2, in order to identify the most suitable saddle width (narrow or wide).

Questa misurazione della distanza tra le due grandi tuberosità del femore combinata con lo step 2 permette di definire quale sia la larghezza della sella più congeniale (Narrow o Wide)

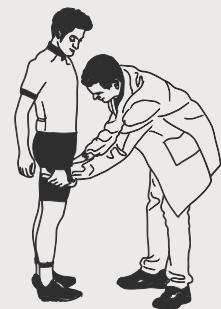

2° STEP

Thighs diameter

The diameter of both thighs is measured and then combined with the step 1 measurement, in order to identify the most suitable saddle width (narrow or wide).

La misurazione del diametro di entrambe le cosce, combinata con la misurazione dello step 1, permette di definire quale è la larghezza della sella più congeniale (Narrow o Wide)

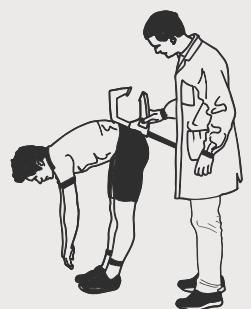

3° STEP

Pelvis rotation

This operation allows the pelvis rotation to be measured, in order to identify whether the user requires a Full-Fit or Open-Fit saddle, in addition to the size of the cut-out, if applicable. The higher the rotation, the greater the pressure on the soft tissue and therefore, the wider the cut-out must be for optimal relief.

Questa operazione consente di misurare la rotazione del bacino e di conseguenza individuare se l'utente necessita di una sella Full-Fit o Open-Fit ed eventualmente definire la dimensione del foro stesso. Maggiore la rotazione, maggiore la pressione sui tessuti molli e più largo dovrà essere il foro per uno scarico ottimale.

Watch the video tutorial here that explains the features and how to use the Smart Caliper and ask your local retailer for information on where you can have this tool.

Scopri qui il video tutorial sulle caratteristiche e modalità di utilizzo dello Smart Caliper e richiedi al tuo agente di zona come averlo.

Cover

MICROFEEL

Special lowered thickness treatment microfiber material, abrasion resistant, weather resistant, perspirant. Great touch and feel. Long lasting and durable. Easy to wash & clean.

Speciale materiale in microfibra a spessore ribassato, resistente alle abrasioni, resistente agli agenti atmosferici, traspirante. Gradevole al tatto. Durevole e resistente. Facile da lavare e pulire.

MICROFEEL SUPERLIGHT

Special lowered thickness treatment microfiber material, abrasion resistant, weather resistant, perspirant. Great touch and feel. Long lasting and durable. Easy to wash & clean.

Speciale materiale in microfibra a spessore ribassato, resistente alle abrasioni, resistente agli agenti atmosferici, traspirante. Gradevole al tatto. Durevole e resistente. Facile da lavare e pulire.

SILKFEEL

Silk-soft-touch surface finish, bi-elastic strut material, waterproof and with good abrasive resistance. Easy to wash & clean.

Finitura al tatto morbida e setosa, materiale bi-elastico rinforzato, impermeabile e con buona resistenza all'abrasione. Facile da lavare e pulire.

WOVEN

Special Microfiber material, shock resistant, weather resistant. Tough touch and abrasion protective. Long lasting and durable. Easy to wash & clean.

Speciale materiale in microfibra, resistente agli urti, resistente agli agenti atmosferici. Forte al tatto e protettivo contro le abrasioni. Durevole e resistente. Facile da lavare e pulire.

CARBON FIBER REINFORCED

High-performance nylon, enhanced with carbon fibres, built with variable thickness, reinforcements by ribs and bridges, which enhance the rigidity with ergonomics and durability characteristics, without affecting weight to the shell.

Nylon ad alte prestazioni, arricchito con fibre in carbonio, costruito con spessori variabili, rinforzato con nervature che ne aumentano la rigidità con caratteristiche ergonomiche e di durata, senza compromettere il peso della struttura.

Shell

FULL CARBON

Handmade with the best high quality modulus unidirectional carbon fiber material, linked to engineering research on shape and structure that guarantee uncompromising lightness and performances. The synthesis of years of experience, research and excellent craftsmanship.

Fatto a mano con materiale di alta qualità in fibra di carbonio unidirezionale di altissimo livello, legato alla ricerca ingegneristica su forma e struttura che garantiscono leggerezza e performance senza compromessi. La sintesi di anni di esperienza, ricerca ed eccellente artigianalità.

GLASS FIBER REINFORCED

Techno-polymer: engineering polymer with high physical and mechanical characteristics (rigidity, toughness, ductility) that allow it cope with static and dynamic loads and ageing.

Techno-polymer: polimero per ingegneria dotato di elevata caratteristica fisico-mecanica (rigidità, tenacità, duttilità) tale da ben sopportare sia carichi statici e dinamici che di invecchiamento.

Padding

PEXFOAM

Hi performance, Ultra-light innovative material with variable thickness and exceptional shape memory. Unmatched energy return. Stability vs low/high temperatures. Biocompatible.

Altamente performante, materiale innovativo ultraleggero con spessori variabili e memoria di forma eccezionale. Ritorno d'energia imbattibile. Stabilità rispetto alle temperature basse/alte. Biocompatibile.

BIOFOAM

Biodynamic low density foam with variable thickness structure that follows the movements of the pelvis when pedalling, for guaranteed comfort, light weight, long lasting resistance and ideal support.

Schiuma biodinamica a bassa densità con struttura di spessore variabile che segue i movimenti del bacino durante la pedalata, per un comfort garantito, leggerezza, resistenza di lunga durata e supporto ideale.

GEL

High density Silicon Gel structure that provide the best comfort to the pelvis bones when pedalling, for guaranteed comfort and ideal support, absorbing all road vibrations.

Struttura in gel siliconico ad alta densità che offre il massimo comfort alle ossa del bacino durante la pedalata, comfort garantito e supporto ideale grazie all'assorbimento delle vibrazioni della strada.

PULLFOAM

Low density foam with variable thickness structure that follows the movements of the pelvis when pedaling, for guaranteed comfort, long lasting resistance and ideal support.

Schiuma a bassa densità con struttura di spessore variabile che segue i movimenti del bacino durante la pedalata, per un comfort garantito, resistenza di lunga durata e supporto ideale.

SUPERCOMFORT

Improved, thicker padding (Biofoam Plus) featuring variable density to better guarantee a comfortable posture while riding. The central opening has been increased to lend maximum relief from perineal pressure while at the same time maintaining a sufficient area of support.

Suitable for E-Bikes.

Imbottitura con spessore maggiorato e strato di Gel (Biofoam Plus) e a densità variabile per meglio garantire un appoggio confortevole durante la pedalata. Massimizzazione del foro centrale per garantire un'ottimale sollevamento della pressione sul perineo e, allo stesso tempo, mantenere un'area di supporto adeguata.

Adatta per E-Bikes

COMFORT

Increased cushioning (Extra Padding) to ensure more comfortable support when pedalling. The central opening has been increased to ensure optimal pressure relief from the perineal area while at the same time maintaining a sufficient support surface.

Imbottitura maggiorata (Extra Padding) per garantire un appoggio più confortevole durante la pedalata. Massimizzazione del foro centrale per garantire uno scarico ottimale della pressione dalla zona perineale e, allo stesso tempo, mantenere un'area di supporto adeguata.

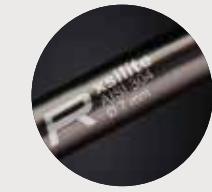

Rail

CFX - CARBON FIBER

Superlight full carbon fiber rails with oval section (9,8 mm x 7 mm) with PATENTED DNA (Dynamic Node Action) technology which prevents twisting and keeps the front of the saddle narrow for great pedalling freedom. It makes the Carbon fiber rails even stiffer and, give to the central geometry a longer section to ensure more extensive saddle adjustment. This Rail is used on Superleggera and Carbon FX saddles. An adaptor might be required with some seat posts.

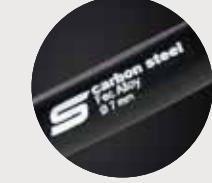

Telaio superleggero completamente in carbonio con sezione ovale (9,8 mm x 7 mm) e Brevetto DNA (Dynamic Node Action), tecnologia che impedisce la torsione e mantiene la parte anteriore della sella più stretta per un ottima libertà di pedalata. DNA rende il telaio in fibra di carbonio ancora più rigido, conferendo alla geometria centrale una sezione più lunga per assicurare alla sella una regolazione più ampia. Questo telaio viene utilizzato sulle selle Superleggera e Carbon FX. Potrebbe essere necessario un adattatore per alcuni reggisella.

Shortfit 2.0

The Shortfit model is the most aggressive saddle in the collection. It is distinguished by its short length and maximised central cut-out. The excellent, generous rear support makes this model ideal for those athletes who rotate their pelvis a lot whilst pedalling and as a result, move closer towards the handlebars. Its technical structure makes it particularly suitable for road use.

Il modello Shortfit è il più aggressivo della collezione, caratterizzato dalla sua lunghezza ridotta, abbinata ad un foro centrale massimizzato. Ottimo e generoso il supporto posteriore che rende questo modello ideale per quegli atleti che durante la pedalata ruotano molto con il bacino portandosi in posizione ravvicinata al manubrio. Per la sua struttura tecnica è particolarmente indicata per utilizzo strada.

Aspide

Aspide is perhaps the all-time best known model from the Selle San Marco collection. Its clean, minimalist line guarantees excellent comfort and even more lightness. The very slim front guarantees excellent leg freedom whilst pedalling. The good rear support helps maintain the riding position. Aspide is particularly suited to road use, yet also offers excellent performance on other types of terrain.

Storicamente Aspide è forse il modello più conosciuto della collezione Selle San Marco. La sua linea pulita e minimalista garantisce un ottimo comfort e ancor più leggerezza. La parte anteriore molto slanciata garantisce un'ottima libertà alle gambe mentre si pedala. Buono il supporto posteriore che aiuta a mantenere la posizione in sella. Aspide è particolarmente apprezzata su strada, ma offre ottime prestazioni anche su altri tipi di terreni.

Allroad

Allroad has been designed to be a versatile saddle that can be used on various terrains, such as the modern gravel applications. Allroad combines the successful ergonomic lines of the Aspide model with more generous padding solutions from the off-road world. This winning combination also includes all aspects of cover protection needed for Gravel use.

Allroad è stata pensata per essere una sella polivalente, utilizzabile nei vari terreni proprio come le moderne applicazioni Gravel. Allroad unisce le vincenti linee ergonomiche di Aspide con soluzioni di imbottitura più generose del mondo Off-Road. Combinazione vincente unita alle necessarie caratteristiche di protezione della copertura nell'utilizzo Gravel.

Ground

Designed and conceived for those who enjoy adventure on all types of surfaces, the Ground ensures maximum comfort without neglecting performance. Its compact shape helps to easily find and maintain the ideal seating position while its rear ensures excellent ischial support. The central cut-out increase the feeling of comfort also on uneven terrain.

Progettata e realizzata per coloro che amano l'avventura su tutte le tipologie di superfici, la Ground assicura il massimo comfort senza trascurare le prestazioni. La sua forma compatta aiuta a trovare e mantenere facilmente la posizione di seduta ideale mentre la sua parte posteriore assicura un eccellente supporto ischiatico. Il foro centrale aumenta la sensazione di comfort anche su terreni sconnessi.

Bioaktive

Bioaktive is a successful line of saddles anatomically designed to suit every style of riding. It benefits of the elaborate experience and heritage of selle san marco, an italian company that produces handmade bicycle saddles since 1935. Premium materials, high technology solutions and dedicated features make each bioaktive saddles unique. The need to simplify the choice for the perfect saddle resulted in a range designed according to riding style: sportive, trekking or city.

Bioaktive è il marchio di una completa gamma di prodotti, che beneficia del know-how di un produttore storico con oltre ottant'anni di esperienza nel settore, l'azienda italiana Selle San Marco. La filosofia Bioaktive FA NASCERE DEI PRODOTTI confortevoli e dal design originale, progettati per adattarsi anatomicamente ad ogni TIPOLOGIA DI UTENTE. La necessità di semplificare il processo di scelta della sella giusta, ha DEFINITO TRE STILI DI PEDALATA: **SPORTIVE, TREKKING E CITY.**

BIOAKTIVE
HUMAN COMFORT

Cover**BIOFOAM**

A challenge: a lighter product with greater durability. Our biofoam padding delivers both. Biofoam's structure is compliant with the movements of the pelvis during pedaling.

It reduces saddle weight and guarantees comfort and durability. The "closed cell" surface ensures the saddle will be water-repellent.

Una sfida: peso inferiore e maggiore resistenza nel tempo. L'imbottitura Biofoam è la nostra risposta per una sella molto morbida e leggera. Questo grazie anche alla struttura biodinamica, che segue i movimenti del bacino durante la pedalata. Lo strato superficiale a "celle chiuse" garantisce l'idrorepellenza dell'imbottitura e consente di non trattenere il calore derivante dall'esposizione al sole e di non causare la fuoriuscita di materiale in caso di rottura.

**OPEN**

The open system is the result of clinical tests and ongoing anatomical research. The feature consists of a gradual opening in the saddle to ensure a total comfort and relief in the perineal area.

Degli speciali e mirati inserti in Gel biocompatibile all'interno dell'imbottitura assicurano l'attenuazione della pressione in corrispondenza delle zone più delicate e offrono protezione dagli urti accidentali.

**GEL**

These Bioaktive saddles are provided with specific gel inserts placed under the protective cover. Their function is to reduce the impact of shocks on sensitive points.

Degli speciali e mirati inserti in Gel biocompatibile all'interno dell'imbottitura assicurano l'attenuazione della pressione in corrispondenza delle zone più delicate e offrono protezione dagli urti accidentali.

**REFLECTIVE**

Two reflective lines enrich the new design of four new products. A special consideration for safety and visibility. Simple reflective details on front and rear for riding in low-light conditions to keep the rider visible on the roads all day long.

Degli speciali e mirati inserti in Gel biocompatibile all'interno dell'imbottitura assicurano l'attenuazione della pressione in corrispondenza delle zone più delicate e offrono protezione dagli urti accidentali.

Technology and Experience.

Comfort and a unique style are the foundations on our saddles, a complete range of technologically advanced that provides extreme comfort for every riding style. All the experience of Selle San Marco with an original design.

Comfort e uno stile unico sono le basi su cui nascono le nostre selle, una gamma completa tecnologicamente all'avanguardia che garantisce estrema comodità per ogni stile di pedalata. Tutta l'esperienza selle San Marco con un design originale.

#amatterofriders

Sportive

For those who use the bike for exercise. Riders who want a perfect balance of comfort and performance will get the ideal solution in this category. A saddle that is suitable for mountainbikers, road racers and trekking riders.

Chi cerca il mix perfetto tra massimo comfort e prestazioni eccellenti, troverà in questa categoria la soluzione ideale. Selle studiate per chi pedala in una posizione performante.. Ottimale sia per chi usa bici da strada, che mountain bike.

Front weight distribution

These products have been developed for mountain-bike, road, and trekking riders who ride with weight distribution is toward the front of the saddle.

Perfetta combinazione di comfort e prestazioni ottimali. Questa categoria, offre la soluzione ideale per percorsi sia "road" che "offroad".

Trekking

The key word: relaxed. This section is for those who ride for leisure and give priority to comfort. Here you'll find saddles designed specifically for leisure riders and urban commuters.

Parola d'ordine: relax. Per chi usa la bicicletta nel tempo libero per divertirsi e rilassarsi, o per spostarsi in modo rapido nelle strade cittadine. Ecco le selle ideali sia per gli amanti del trekking, sia per chi si muove in città.

Center weight distribution

The weight distribution is placed in the center of the saddle due to pelvis rotation. This is the category to consider if you are looking for an all-day comfort on a city or trekking bike.

Distribuzione del peso più centrale sulla sella dovuta alla ridotta rotazione del bacino per un "all-day comfort" su una city-bike o trekking, questa è la categoria da consultare.

City

Riding everyday on city roads has never been so pleasant! Choose a saddle from this category to ensure compliant biodynamics that follow the movements of pelvis during pedaling from a more upright position.

Usare la bicicletta quotidianamente per spostarsi in città non è mai stato così piacevole. Chi sceglie le selle di questa linea sa di affidarsi a prodotti con sedute anatomicamente confortevoli, molto ampie, per un comfort estremo.

Adatte anche per il Touring.

Rear weight distribution

The weight distribution is concentrated in the rear of the saddle as the cyclist sits upright. Saddles placed in this category allow their riders to keep a comfortable upright riding position and do not limit the pelvis movements during the ride because of their biodynamic.

La distribuzione del peso è più verso la parte posteriore della sella, per la posizione eretta del ciclista. Le selle di questa categoria consentono una posizione eretta, pur rispettando la funzione biodinamica del bacino durante la pedalata. Queste selle sono indicate anche per il percorso di cicloturismo e trekking.

Accessories

Selle San Marco accessories: everything you need to ride in comfort and safety, thanks to the Presa Supercomfort Kit. Without forgetting style, the various colors of the handlebar tapes and the Presa Corsa Iridescent are proof of this. The Test Saddles allows the cyclist to try the saddle on the road before making the purchase.

Gli accessori di Selle San Marco: tutto ciò che serve per pedalare in comodità e sicurezza, grazie a Presa Supercomfort Kit. Senza tralasciare lo stile, le varie colorazioni dei nastri manubrio e il Presa Corsa Iridescent ne sono una prova. Le Selle Test inoltre, permettono al ciclista di provare la sella su strada prima di effettuare l'acquisto.

Test Saddles

Selle San Marco lets users find the right products by providing test saddles in-store that also indicate the BRP on the cover. In order to make the BRP easier to understand, Selle San Marco indicates the distance between the tip of the saddle and the BRP on its main models.

Selle San Marco offre agli utenti la possibilità di trovare la propria sella ideale attraverso le selle test che riportano anche l'indicazione BRP sulla grafica della cover. Per facilitare la definizione del BRP, Selle San Marco indica per i suoi modelli principali la distanza tra la punta della sella e il BRP stesso.
