Never buy the wrong saddle again with the **idmatch** Smart Caliper

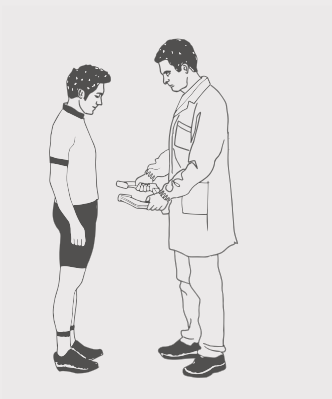

Choosing a saddle is one of the most complex issues that cyclists face. Thanks to the special caliper designed for Selle San Marco, i.e. "idmatch Smart Caliper," the ideal saddle can be identified in just three quick, intuitive steps, in the user's presence. The tool's internal algorithm analyses the obtained anthropometric data in order to produce a result: intertrochanteric distance, thigh diameter and pelvis rotation.

code: 0000000000146 Smart Caliper

1° Step

Intertrochanteric distance

The distance between the two major femur tuberosities is measured and then combined with step 2, in order to identify the most suitable saddle width [narrow or wide].

2° Step

Thighs diameter

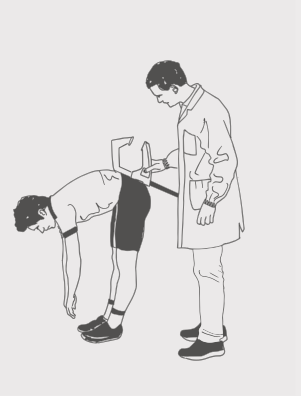

The diameter of both thighs is measured and then combined with the step 1 measurement, in order to identify the most suitable saddle width [narrow or wide].

3° Step

Pelvis rotation

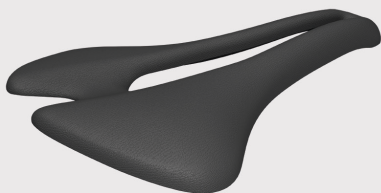

This operation allows the pelvis rotation to be measured, in order to identify whether the user requires a Full-Fit or Open-Fit saddle, in addition to the size of the cut-out, if applicable. The higher the rotation, the greater the pressure on the soft tissue and therefore, the wider the cut-out must be for optimal relief.

Watch the video tutorial here that explains the features and how to use the Smart Caliper and ask your local retailer for information on where you can have this tool.

For more information visit idmatch.cc

Cover

3D PRINTED

The 3D printed cover, with a dedicated proprietary pattern, features differentiated cushioning zones that provide progressive absorption over the entire surface area, ensuring comfort and support for the rider.

MICROFEEL SUPERLIGHT

Special lowered thickness treatment microfiber material, abrasion resistant, weather resistant, perspirant. Great touch and feel. Long lasting and durable. Easy to wash & clean.

MICROFEEL

Microfiber material, abrasion resistant, weather resistant, perspirant. Great touch and feel. Long lasting and durable. Easy to wash & clean.

SILKFEEL

Silk-soft-touch surface finish, bi-elastic strut material, waterproof and with good abrasive resistance. Easy to wash & clean.

TEXFEEL

Created to give the texture and feel of fabric but with the classic comfort of a traditional cover. Texfeel is easy to clean, nice to touch, and keeps your saddle looking its best for longer.

Shell

FULL CARBON

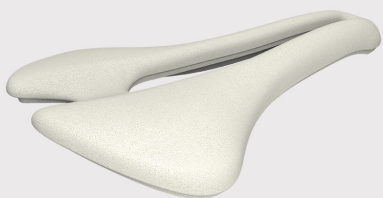

Handmade with the best high quality modulus unidirectional carbon fiber material, linked to engineering research on shape and structure that guarantee uncompromising lightness and performances. The synthesis of years of experience, research and excellent craftsmanship.

CARBON FIBER REINFORCED

High-performance nylon, enhanced with carbon fibres, built with variable thickness, reinforcements by ribs and bridges, which enhance the rigidity with ergonomics and durability characteristics, without affecting weight to the shell.

Padding

PEXFOAM

HI performance, Ultra-light innovative material with variable thickness and exceptional shape memory. Unmatched energy return. Stability vs low/high temperatures. Biocompatible.

BIOFOAM

Biodynamic low density foam with variable thickness structure that follows the movements of the pelvis when pedalling, for guaranteed comfort, light weight, long lasting resistance and ideal support.

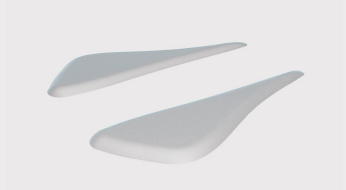

PULLFOAM

Low density foam with variable thickness structure that follows the movements of the pelvis when pedaling, for guaranteed comfort, long lasting resistance and ideal support.

GEL

Hight density Silicon Gel structure that provide the best comfort to the pelvis bones when pedalling, for guaranteed comfort and ideal support, absorbing all road vibrations.

SUPERCOMFORT

Improved, thicker padding (Biofoam Plus) featuring variable density to better guarantee a comfortable posture while riding. The central opening has been increased to lend maximum relief from perineal pressure while at the same time maintaining a sufficient area of support. Suitable for E-Bikes.

COMFORT

Increased cushioning (Extra Padding) to ensure more comfortable support when pedalling.

Rail

C carbon fiber
hs composite
Ø 9x7 mm

CFX - CARBON FIBER

Superlight full carbon fiber rails with oval section (9 mm x 7 mm) with PATENTED DNA (Dynamic Node Action) technology which prevents twisting and keeps the front of the saddle narrow for great pedalling freedom. It makes the Carbon fiber rails even stiffer and, give to the central geometry a longer section to ensure more extensive saddle adjustment. This Rails is used on Superleggera and Carbon FX saddles. An adaptor might be required with some seat posts.

R xsilite
AISI 304
Ø 7 mm

RACING - XSILITE

AiSi304 Stainless Steel hollow rails (outer Ø 7 mm - inner Ø 5 mm). Very Light, resistant, and tough against all weather condition. A special production process guarantees excellent fatigue resistance. All Racing level saddles have a Xsilite Rails.

D manganese
25CrMo4
Ø 7 mm

DYNAMIC - MANGANESE

High-tech hollow Chromoly rails (outer Ø 7 mm - inner Ø 4 mm) + external painting, light and resistant. All Dynamic saddles have Manganese Rails.

S carbon steel
Fec Alloy
Ø 7 mm

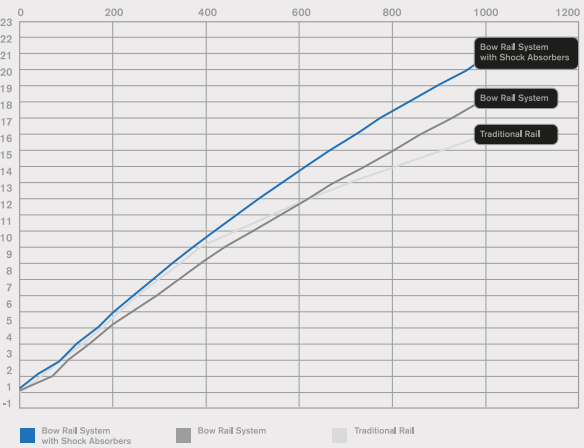

CARBON STEEL

C45 "Reinforced" full steel frame (diameter Ø7mm) with external paint, light and resistant. All "Sport" saddles have Carbon Steel Rails.

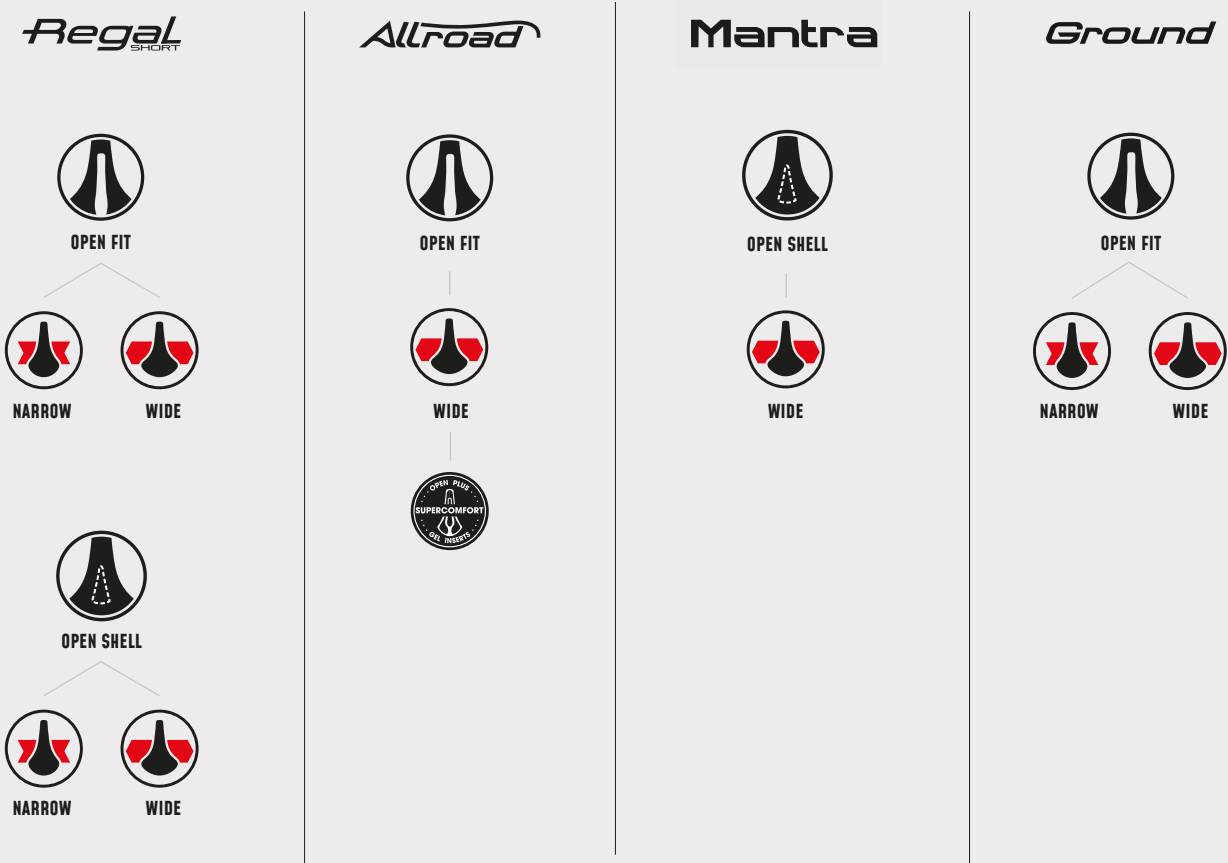

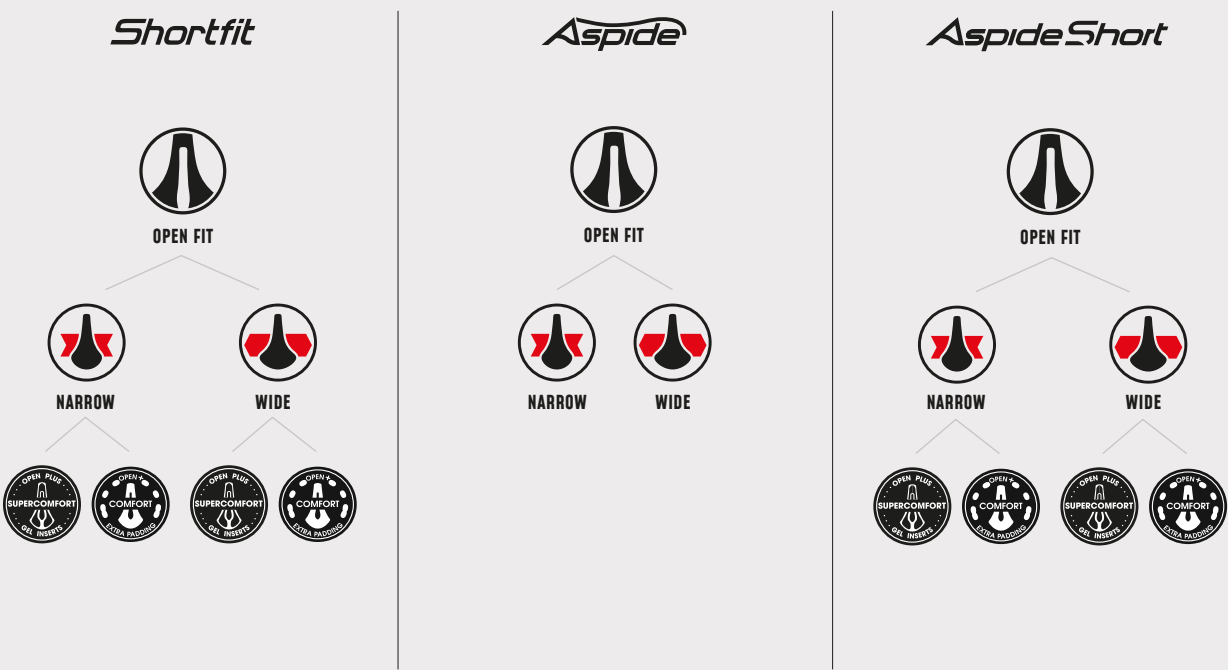

BOW RAIL SYSTEM

The Bow Rail System brings so much more shell flexibility by incorporating shock absorbers into the design.

Off-Road

Saddles designed to maintain control in the most challenging situations, off the beaten paths between MTB and Enduro trails. Without sacrificing freedom of movement, providing solid and complete support.

· MANTRA
· GROUND

Mantra

Dedicated to enduro trails and gravel adventures the Mantra is all about extreme comfort on the climbs and total control on the descents. Advanced technologies and design let you move freely on the bike and keep focused on the trail ahead.

You need all the support you can get when pointing down a technical double black descent or lining up at the start of an enduro race. The Mantra is made with a wide nose and delta shaped design that helps you find the right riding position in rough conditions. Reach the top of gruelling climbs in top condition thanks to the open shell design that reduces perineal pressure and an advanced Biomechanical Reference Point that encourages the correct seating position.

Bioaktive

A collection of saddles characterized by plenty of cushioning and a wide fit. To turn every city commute or urban adventure into a pleasant cycling experience.

- **SPORTIVE**
- **TREKKING**
- **CITY**

Technology and Experience.

Comfort and a unique style are the foundations on our saddles, a complete range of technologically advanced that provides extreme comfort for every riding style. All the experience of Selle San Marco with an original design.

Cover

PULLFOAM

Low density foam with variable thickness structure that follows the movements of the pelvis when pedaling, for guaranteed comfort, long lasting resistance and ideal support.

OPEN

The open system is the result of clinical tests and ongoing anatomical research. The feature consists of a gradual opening in the saddle to ensure a total comfort and relief in the perineal area.

GEL

These Bioactive saddles are provided with specific gel inserts placed under the protective cover. Their function is to reduce the impact of shocks on sensitive points.

REFLECTIVE

Two reflective lines enrich the new design of four new products. A special consideration for safety and visibility. Simple reflective details on front and rear for riding in low-light conditions to keep the rider visible on the roads all day long.

Categories

SPORTIVE

For those who use the bike for exercise. Riders who want a perfect balance of comfort and performance will get the ideal solution in this category. A saddle that is suitable for mountainbikers, road racers and trekking riders.

FRONT WEIGHT DISTRIBUTION

These products have been developed for mountain-bike, road, and trekking riders who ride with weight distribution is toward the front of the saddle.

TREKKING

The key word: relaxed. This section is for those who ride for leisure and give priority to comfort. Here you'll find saddles designed specifically for leisure riders and urban commuters.

CENTER WEIGHT DISTRIBUTION

The weight distribution is placed in the center of the saddle due to pelvis rotation. This is the category to consider if you are looking for an all-day comfort on a city or trekking bike.

CITY

Riding everyday on city roads has never been so pleasant! Choose a saddle from this category to ensure compliant biodynamics that follow the movements of pelvis during pedaling from a more upright position.

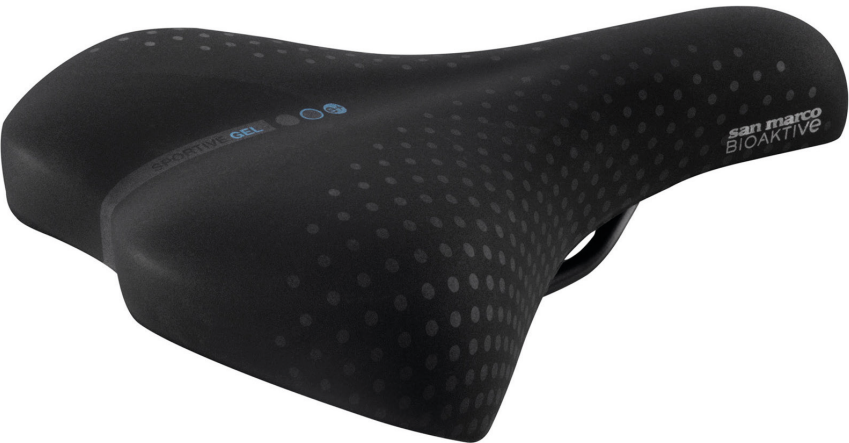

REAR WEIGHT DISTRIBUTION

The weight distribution is concentrated in the rear of the saddle as the cyclist sits upright. Saddles placed in this category allow their riders to keep a comfortable upright riding position and do not limit the pelvis movements during the ride because of their biodynamic.
